

Cristian David Moreno Riaño

Senior FullStack Web Developer

Bogotá/Colombia | +573022539479 | kyonax.corp@gmail.com | [Linkedin](#) | [Github](#) | [Personal Web](#)

Senior FullStack Web Developer with 8 years of experience delivering **scalable, adaptable, and high-performance** frontend solutions for national and international clients. Strong background in defining workflows, planning, architecting web systems, and integrating AI tooling to automate repetitive work and keep delivery fast. Skilled on performance analysis, optimization, automated testing, accessibility, structured-data SEO, leading refactors to reduce technical debt, and platform migrations that preserve full functionality. Efficient on remote work environments.

EXPERIENCE

2025-Present **Agile Engine - Madison Reed** **Remote - Bogotá D.C**
Senior Software Engineer (Frontend Web Developer)

- Drafted architecture decisions and extended ACs to cover edge cases on further implementations for a **Vue 3 e-commerce redesign**, wrote **TDD** unit tests with **Vitest** upfront, codified style rules in **ESLint**, and added **Playwright e2e** suites, keeping PR reviews focused on substance and avoiding rework from missed ACs or Code Quality.
- Captured legacy-page behavior with **Playwright** before each redesign and reused it on the new implementation, so the team shipped each redesign across every key flow without breaking the user journey.
- Designed an **AI-assisted development workflow** by abstracting repetitive patterns into custom skills, scripts, and tooling that automate the work accurately, picking **Claude Code**, **GPTel (Emacs)**, **GPT**, **Gemini**, **Grok**, or **LiteLLM** per task by strengths and efficiency, so engineering time went into real design decisions instead of repetitive scaffolding.
- Improved **SEO** and **AEO (Answer Engine Optimization)** by identifying the data carrying business value on each page and exposing it through **JSON-LD**, validated **SSR** output, and a semantic, **ADA**-compliant **h1 → h2 → h3** structure, so search bots and AI engines parse intent fast and accurately, improving rich-result eligibility, AI-engine citations, and conversion.
- Architected reusable **Vue 3** components and **Pug** templates with **Stylus** styling driven by CMS configuration on the **Express SSR + MongoDB-backed CMS** stack (**Vite** with legacy **Webpack 4**) and documented them in **Storybook**, so routine page tuning and content updates shipped through CMS without engineering tickets, while the same blocks scaled to new pages with minimal rework.
- Integrated third-party SDKs (**Birdeye** location reviews, **Dynamic Yield** A/B testing, **Dash Hudson** UGC, **Google Auth / FedCM** SSO, **Segment** analytics), wrapping each in CMS-driven abstraction layers so A/B experiments, feature rollouts, and integration tuning ran through configuration instead of a new PR per change.
- Made performance an objective on every redesign, capturing **Lighthouse** and **Core Web Vitals** baselines and validating the new implementation beat them before merging, fixing bottlenecks in the same ticket so each release shipped with measurable gains over the previous design.

2017-Present **Zerønet Labs** **Remote - Villavicencio/Meta**
Founder & Lead FullStack Engineer

- Delivered frontend solutions for multiple startups and medium companies, adapting to each client's stack (**React.js**, **Next.js**, **Vue.js**, **Webpack**, **Vite**, **Gulp.js**, **Grunt.js**, or **Vanilla JS (HTML5, SASS/SCSS, ES6+)**) so every project ran on the platform that best fit the client's team and constraints instead of forcing a single template.
- Built reusable **npm packages** and **UI libraries** across **React**, **Vue**, and **Next.js** using component-composition patterns, with publishing automated through **semantic-release** and **GitHub Actions**, raising dev velocity, keeping visual consistency project-to-project, and avoiding component duplication in long-term maintenance.
- Built custom libraries targeting recurring frontend performance bottlenecks (image-heavy rendering, asset loading, repetitive setup work), cutting load times across client sites and removing the need to re-solve the same problems.
- Designed modular project architectures and **SASS/SCSS** styling systems built on design patterns and naming conventions, so codebases stayed maintainable through feature growth and refactors didn't require ripping out foundational decisions.
- Containerized development environments with **Docker** and **docker-compose** and configured CI pipelines for production / dev / staging, so onboarding new collaborators or client teams took one command and every environment matched regardless of OS or local toolchain.

2023-2025 **Softtek** **Remote - Bogotá D.C**
Senior Software Engineer (Full Stack Web Developer)

- Migrated an internal admin platform into an e-commerce site on **Shopware (Symfony + Vue.js)**, planning the architecture and mapping every requirement and implication before cutover, so the customer purchase flow shipped fully automated and no business operation was lost.

- Designed a **SASS/SCSS** pattern library, mixin set, and modular architecture across the e-commerce storefront, with **PostCSS** covering cross-browser inconsistencies, so styling stayed performant and maintainable as the storefront grew and design changes propagated across every theme without manual rework.
- Engineered custom frontend solutions inside **Shopware's** OOB template system, rebuilding template logic alongside the Shopware core team where needed, so the client's design and UX requirements shipped with full fidelity instead of being cut to platform defaults.
- Refined sprint planning and work distribution on **Azure DevOps** under **Agile** methodology, structuring initiatives into well-scoped, parallelizable units so the team kept steady velocity even when scope shifted mid-sprint.
- Led onboarding through walkthroughs of the **frontend architecture, design patterns, code guidelines, and custom plugins** I authored, plus a documentation set that became the team's shared reference, so joiners ramped up to productivity without constant 1:1 time.
- Owned daily **Pull Request** reviews across the team and enforced **Unit Testing**, code-style consistency, and design-pattern fidelity, catching performance issues, excessive nesting, and architectural drift before they reached production.
- Containerized development with **Dockware** (Shopware-tuned Docker images) and **docker-compose**, and configured **Azure DevOps** CI pipelines for production, dev, and staging with automated PR-validation, so the team spun up identical Shopware environments in one command and merges only happened after the gate ran clean.
- Partnered with backend teams to define **REST** and **GraphQL** endpoint contracts before implementation, aligning frontend and backend on shape, naming, and error handling so integration sprints didn't stall on contract mismatches.

2021-2023 **Cabeza Rota**
Senior Frontend Web Developer

Remote - Villavicencio/Meta

- Developed high-performance **landing pages, e-commerce sites** and **microservices** for multiple clients using **Next.js, React.js, Vue.js, Nest.js, Node.js, Redux, AntDesign**, and **SASS/SCSS**. Applied **SSR/SSG/ISR** patterns in Next.js, GraphQL - Apollo for data-driven pages, and **WebSockets** for real-time features when required.
- Improved digital brand presence with robust **UI/UX** implementations validated through **A/B testing** used analytics (**GA4, Hotjar**) and **funnels/heatmaps** to iterate on design and increase engagement.
- Led and Collaborated with multiple teams, adapting to various Agile Methodologies like **Agile and SCRUM**, while ensuring adherence to project specific **Code Guidelines**, doing **Pull Request - PRs**, and mentoring developers. Enforced PR review standards, and introduced testing with **Jest**.
- Translated **UI/UX** mockups, templates into dynamic, responsive, and user focus frontend implementations, aligning with the expected business goals.

2021-2021 **Cabeza Rota**
Digital Marketing & Web Developer

Remote - Villavicencio/Meta

- Built a data-driven design loop using **A/B Testing** with **GA4** and **Hotjar**, refining website components and flows from real user signals so design changes shipped with measurable engagement and conversion gains, not guesswork.
- Built marketing websites and landing pages for agency clients in **Next.js, React.js, Vue.js, Nest.js, Redux, SASS/SCSS, Tailwind, Bootstrap**, or **Wordpress**, matching the stack to each client's brand and constraints so launches shipped fast without sacrificing scalability.
- Designed reusable **custom components** tailored to each project's requirements, design system, and tech stack, so features shipped faster and patterns stayed consistent as the codebase grew.

2020-2021 **Cabeza Rota**
Growth Marketer & Web Developer

Remote - Villavicencio/Meta

- Drove brand awareness and engagement on **Twitter, Instagram, Discord** and **YouTube** by executing targeted growth strategies increasing online presence, follower engagement, and customer acquisition.
- Leveraged analytics to refine content strategies, boosting brand loyalty and optimizing campaign performance.
- Contributed to brand websites and landing pages using **React.js, Vue.js, Node.js, AWS, Typescript**, and **SASS/SCSS**, ensuring scalable and high performing products.
- Optimized user flows by implementing **custom components, custom elements, and custom hooks**, to improve website's functionalities, to deliver faster rendering websites.

SKILLS & TOOLS

HTML/HTML5	CSS3/CSS	SASS/SCSS	React.js	Next.js	Vue.js
Nuxt.js	Preact.js	Tailwind	Bootstrap	AntDesign	Styled Components
Redux	Zustand	Recoil	Context API	Webpack	Turbopack
Vite	Babel	Grunt.js	Gulp.js	PostCSS	Material UI
npm	bun	semantic-release	Jest	ESLint	GraphQL
Apollo	WebSockets	Axios/Fetch	Node.js	Nest.js	Symfony
Docker	Kubernetes	GitHub Actions	Azure DevOps	GitLab CI	GA4
Hotjar	AVI/WEBP	Code Splitting	SSR/SSG/ISR	Caching Strategies	Lazy Loading
A/B Testing	Unit Testing	Funnels	Heatmaps	User Flows	Analytics-driven Design
CI Pipelines	Wordpress	Shopware	Cybersource	AWS	Linux/Unix
Vue 3	Vuex	Vue Router	Pug	Stylus	Vitest
Playwright	E2E Testing	TDD	Express	MongoDB	MySQL
JSON-LD	SEO	AEO	Lighthouse	Core Web Vitals	ADA Accessibility
Birdeye	Dynamic Yield	Dash Hudson	Segment	Sentry	FedCM
Claude Code	GPTel (Emacs)	LiteLLM	GPT	Gemini	Grok
AI Skills	AI Workflows	Prompt Engineering	LLM Orchestration	Storybook	Prettier
Vue Test Utils	Swiper	Dayjs	Figma	Documentation	Agile/SCRUM
Javascript Typescript PHP Python Bash Scripting Powershell Scripting					

EDUCATION

2021	Caldas University	Villavicencio/Meta
Diploma in Basic Programming Skills - Mision TIC 2022		
2018-2020	Universidad de Los Llanos	Villavicencio/Meta
Systems Engineer - Relevant Completed Subjects: Fundamentals of Programming - Introduction to Systems Engineering - Logical Thinking - Data Structures - Science, Thecnology, and Development
